## Handmade Irish Terracotta Tiles

These tiles are manufactured by hand in our plant. Fired to extremely high temperatures, the tiles are resistant to frost and excellent to store heat making them suitable for both indoor and outdoor applications. Being non-slip and hardwearing they are ideal for conservatories, patios, kitchens, pubs and swimming pool areas. **One of the major advantages of terracotta tiling is that they are the highest recommended floor covering to use in conjunction with underfloor heating.**

Tiles are available in a range of sizes and colours, and samples are available on request.

225 x 225 mm

300 x 300 mm

All tiles are approximately 25mm thick.

These tiles come in batches and are subject to colour variations. A single sample cannot be taken therefore as an accurate indication of the final colour. As well as colour variations, our floor tiles may have minor chips, blemishes and imperfections. This is usual in this type of product.

We also supply a range of products to help care for your terracotta tiles.

## Machine Made Terracotta Tiles

These tiles are for those who prefer a more uniform tile. They are suitable for both indoor and outdoor applications. They are also excellent with underfloor heating

They are available in 200 x 200mm or 300 x 300 mm and are approximately 25mm thick.
